

BRC meeting of National Recording Schemes

Saturday 23rd March 2019, CEH Wallingford

Recording wildlife for a very long time

What is more we hope that others, in emulation of us, may investigate the spontaneous plants, each of his own area, more diligently so that in this way a complete Phytologia Britannica may finally appear from all their contributions (Ray, [1660](#); in the Preface to the Cambridge Catalogue; translated by Oswald & Preston, [2011](#)).

UK Beetle Recording

There are over 4000 species of beetle found in Britain, Ireland and surrounding islands. This website allows you to find out more about these fascinating insects, and provides a gateway for you to submit and manage your beetle records.

It's International Year

Dipterists Forum promotes the conservation of true flies in the UK. Flies are amazingly diverse and many of them can be hugely rewarding to study. Some are pests or disease carriers but many are attractive and some are very beautiful.

Home Announcements Species & Recording Resources Conservation

Promoting the study of Centipedes, Millipedes and Woodlice in Britain

Species of the Month

Metatriconiscoides celticus

British Myriapod and Isopod Group (BMIG) aims to actively develop identification, training and recording relevant to improving the knowledge and conservation of centipedes, millipedes, pauropods & symphylans (the Myriapoda) and woodlice & waterlice (the Isopoda) found in Britain and Ireland.

Recording Schemes

The group is responsible for three National Recording Schemes, one each for centipedes, millipedes and woodlice & waterlice.

Publications

The BMIG Newsletter is produced twice a year and the more formal BMIG Bulletin is published annually.

Field Meetings

We hold an annual field meeting to which all are welcome, beginners and experts alike.
